The completed Universal Need Statement is the most important information component in the Expeditionary Force Development System (EFDS). As the primary means of entry into the EFDS, the UNS acts as a "work request" for current and future capabilities within the EFDS. The UNS identifies operational enhancement opportunities and deficiencies in capabilities. Opportunities include new capabilities, improvements to existing capabilities, and elimination of redundant or unneeded capabilities. "Universal" highlights its common use by any Marine Corps organization to capture both current needs and future needs developed through analysis, assessment, and experimentation with future warfighting concepts.

Portfolios exist from cradle to grave.

EFDS Workflow

Following completion of the UNS process (the final Solution Planning Directive (SPD) is signed and approved), the issue is then moved to a "portfolio" for further action. If the SPD directs the generation of a new requirement, a portfolio will be created. For an issue that requires modifications/additions to an existing requirement, the issue will then be attached to that particular portfolio. A portfolio contains the following: Requirement Name, CDTS Identification Number, Brief Sheet, Fielding Plan, associated Requirement Documents, System Description, Current Status of the requirement, and a photograph of a potential materiel solution.

The Command Automated Program/Information System (CAPS) management system is designed to assist the Marine Corps personnel in the accomplishment of requirements associated with the acquisition process. CAPS provides a "single point-of-entry" for the generation, editing, staffing, review/approval and retrieval of acquisition related documents, schedules and briefing materials.

The Marine Corps Systems Command (MARCORSYSCOM), as the sole organization accountable for Marine Corps tactical systems acquisition, requires CAPS and allows the development and generation of electronic documents in standard formats; conversion of on-hand paper and microfilm documents into electronic digital images; distribution of those documents to authorized users; manipulation of the documents; provision of improved user access, control and storage of files; and enhancement of overall productivity of the command.

NBC - Joint Service Light Nuclear, Biological & Chemic… TS ID: 93060JA
Reconnaissance System (JSLNBCRS)

Responsible Officer: MGySgt Gossage, A
Branch: GCE
Classification: UNCLASS
Primary MA: 21 Direct Fire and Maneuver
MCCDC No: MNS: NBC 1.13
ORD: NBC 1.13; NBC 1.13(JSOR)

Requirement: Current capabilities consist of 10 German FOCHS vehicles currently in Marine Corps inventory. Current capability is the result of an approved Required Operational Capability (ROC) dated (3 September 1991). Problems with the FOCHS are as follows: a. The vehicle's gross weight of 18.3 metric tons cannot be lifted by the CH53E, and standard cube (almost 2000 cubic feet) strains the already limited strategic lift of the MAGTF. b. Since the vehicles are foreign produced, maintenance support is quite difficult and expensive. Lack of an

The Brief Sheet is your best source for obtaining an overall status of the Program.
